SUBJECT AND AUTHOR INDEX

This index includes all material appearing in Volume 6 (February, April, June, August, October and December, 1950)

LUBRICATION ENGINEERING — *Names of authors are in small capitals*

A

	No.	Page
Abstracts, 1950 Convention Papers	2	64
ALBL, O. M., Lubrication Service System	2	67
ALLEN, C. M., Biography of	4	161
ALLEN, C. M., and DAVIS, K. A., Studies of the Load-Carrying Capacity of Sleeve Bearings	4	161
Application of Wear Resistant Phosphate Coatings to Ferrous Surfaces, M. B. ROOSA	3	117
Aviation Lubricating Oil Re-Refining Practice, (Oil Reclaiming Symposium), J. T. HENDREN	5	214

B

Bearing, Journal, Pumping Characteristics of An 180-Degree, A. E. ROACH	3	122
Bearing Requirements versus General Grease Characteristics, T. G. ROEHNER	5	220
Bearings, Roll Neck, Load, Speed and Operating Temperature of, J. H. HITCHCOCK	6	252
Bearings, Sleeve, Studies of the Load-Carrying Capacity of, C. M. ALLEN and K. A. DAVIS	4	161
BISSHOPP, K. E., Biography of	2	70
BISSHOPP, K. E., LYPE, E. F. and RAYNOR, S., Closure to Discussions — See Ernst, Hans, and Shaw, Milton C.	2	74
BISSHOPP, K. E., LYPE, E. F. and RAYNOR, S., Role of Cutting Fluid As A Lubricant, The	2	70
BISSON, E. E., Biography of	1	16
BISSON, E. E., and JOHNSON, R. L., NACA Friction Studies of Lubrication at High Sliding Velocities	1	16
BLACK, A. R., Biography of	5	209
BLACK, A. R., Oil Reclaiming Symposium, (Reclaiming of Used Lubricating Oil)	5	209
BORROR, KENNETH P., Discussion of Roosa, M. B., Paper	3	120

C

Centrifugal Reclamation of Industrial Petroleum Products, (Oil Reclaiming Symposium), KENNETH D. REED	5	212
CHAMBERLAND, H. J., Biography of	1	21
CHAMBERLAND, H. J., Effectiveness of Mist Lubricating and Cooling Systems	1	21
CLEAVELAND, D. M., Biography of	5	208
CLEAVELAND, D. M., Oil Reclaiming Symposium, (Reclamation of Industrial Petroleum Products)	5	208
Compressor Lubrication, K. L. HOLLISTER	4	158
Convention Papers, 1950, Abstracts	2	64
Cooling Systems, Effectiveness of Mist Lubricating and, H. J. CHAMBERLAND	1	21
Cutting Fluid Action, Fundamentals of, M. EUGENE MERCHANT	4	163
Cutting Fluid As A Lubricant, The Role of, K. E. BISSHOPP, E. F. LYPE and S. RAYNOR	2	70

D

DANSE, L. A., Biography of	5	206
DANSE, L. A., Organized Lubrication In a Manufacturing Plant	5	206
DAVIS, K. A., Biography of	4	161
DAVIS, K. A.—See ALLEN, C. M.	4	161

E

EBREY, G. O., (Abstract), Re-Refining of Used Mineral Oils By Treatment with Activated Clay and Heat, (Oil Reclaiming Symposium)	5	219
EBREY, G. O., Biography of	6	267
EBREY, G. O., Oil Reclaiming Symposium, (Re-Refining of Used Mineral Oils by Treatment with Activated Clay and Heat)	6	267
Effectiveness of Mist Lubricating and Cooling Systems, H. J. CHAMBERLAND	1	21
Engineer, The Lubrication—His Establishment and Development in Industry, G. D. JORDAN	4	168
ERNST, HANS, Discussion of Bisshopp, K. E., Lype, E. F. and Raynor, S., Paper	2	73

F

Ferrous Surfaces, Application of Wear Resistant Phosphate Coatings to, M. B. Roosa	3	117
FOWLER, W. H., Discussion of Hayden, M. A., Paper	6	262
Friction Studies, NACA, of Lubrication at High Sliding Velocities, E. E. BISSON and R. L. Johnson	1	16
Fundamentals of Cutting Fluid Action, M. EUGENE MERCHANT	4	163

G

General Grease Characteristics versus Bearing Requirements, T. G. ROEHNER	5	220
GOODALE, R. W., Biography of	5	210
GOODALE, R. W., Oil Reclaiming Symposium, (Reclaiming Industrial Petroleum Products)	5	210
Grease Characteristics, General, versus Bearing Requirements, T. G. ROEHNER	5	220

LUBRICATION DAN SEZ:

We didn't discover the Drake Well in 1859 . . . but

just 17 years later (1876) our company was founded

in these 74 years— tremendous experience, constant laboratory research, close study of industrial lubricant problems have resulted in the development of

*** LEADOLENE Klingfast**

. . . and one of our good customers recently DISCOVERED that they had better protection, and the consumption of Leadolene KLINGFAST was just *one-fifth* the quantity of a high grade lubricant they had been using previously—on enclosed table roller gear housings of a continuous plate mill. Leadolene KLINGFAST *can do a better protective job for you, too, more economically,* under such difficult conditions as climatic changes, excessive water and abrasive conditions. Our engineers will be glad to work with you.

CHECK THESE 9 IMPORTANT FACTS:

1. **EXTREME PRESSURE pH-ilm STRENGTH** of 50,000 lbs. per square inch minimum by "Timken" testing machine.
2. **ADHESIVENESS** in which affinity for steel and other metals develops maximum adhesion and prevents drippage or creeping. Retains a flexible coating in nature.
3. **WATER REPELLENCE** which retards washing off, creates a lubricating pH-ilm under moisture or water conditions.
4. **CORROSION PREVENTION** is an excellent protective coating in that it will not etch or corrode metals. Is never acidic.
5. **COMPOUNDED STABILITY**—Will not bleed or change physical condition within range of higher than usual temperatures for this type of lubricant.
6. **LOW TEMPERATURE FACTORS**—While having a solidifying action by decreased temperature as low as —40 F., it does not harden, crack or decrease in adhesion. The flexible coating withstands distortion of the application.
7. **ABRASIVE RESISTANCE**—Extremely high for a lubricant. Does not wipe off nor will be removed in handling by workmen's hands or gloves. Is extremely repellent to adhesion of scale, metallics and other forms of dusts or contamination.
8. Klingfast has remarkable corrosive resistance to salt or sea water, acidic vapors and solutions.
9. Klingfast can be removed by ordinary solvents such as kerosene, gasolene, naphtha, carbon tetrachloride and similar substances but is highly impervious to lubricating oils and greases.

*LEADOLENE . . . the "I. P. Lubricant" (Indestructible pH-ilm) . . . for Industrial Needs

The Brooks Oil Co.
